A new publication model for SAJOT

Historically SAJOT has always published 1 volume per year, comprising three issues published in April, August, and December. This publication structure is a serial process, where each submission is desk-edited / vetted, peer-reviewed and, if accepted, goes through an intensive copy-edit by two editorial team members, is sent for layout and conversion to PDF format and, after a final check by a team member and author(s), is queued for publication in a specific issue. The steps in this serial process could cause delays in the turn-around time of all submissions. If, for example, a manuscript is copy edited and accepted for publication in early May, it can only be published in the August or December issues of the same year, which could mean a delay of a further 3 or even 7 months from acceptance to publication.

In an attempt to cut down on the turn-around time for submissions, SAJOT is currently considering adopting a ‘continuous publication’ or ‘online first’ publication model. In this model, each manuscript is posted on the website as soon as it is accepted, finalised and laid out. The benefit of this model to authors, is that articles will have full citation potential in a much shorter time. Readers will also benefit as they will have access to information much sooner, especially in cases where article content is time sensitive.

Another potential benefit is that any issues (such as problems experienced with in-text hyperlinks, errata, referencing, etc.) can be immediately detected and rectified. Should this occur, the copy of the article is retracted, and replaced with a revised version bearing a different article identifier. These corrections can therefore be done before the journal issue is loaded on the various indexes such as ScIELO.

Some journals that follow this model, publish only one volume per year, with no sub-division into consecutive issues. Although the benefit of this model is that all accepted articles are available online immediately, the volume will only be published at the end of the year, which has implications for institutional recognition, funding, and credit.

The other option is to upload all final versions of the articles immediately, and then in April, August, and December, all the articles that have been made available online in the preceding months, will be combined and published in three separate issues throughout the year.

Citations
In continuous publication, individual articles will also no longer be sequentially paginated per issue; each article will start on Page 1. In other words, instead of the first article in an issue starting on page 1, the second on page 20, the third on page 36 etc., for citation purposes, each article will be sequentially numbered in the order it is published in a particular issue, providing a unique article identifier, i.e., Volume 54, no. 3, Article 34, pp 1-9; Volume 54, no. 3, Article 21, pp 1-10. The article number will therefore still demarcate the order in which the articles in a particular issue were published.

Call for comment
We are hoping to implement this model as soon as possible, and trust that it will be of benefit to authors and readers and spread out the ‘crunch-time’ stress of the editorial team and layout artists. We are open to and welcome any comments or questions from our users for consideration. Please contact the editorial team at sajot@otasa.org.za.

APA Style 6th Edition Blog: How to Cite an Article With an Article Number Instead of a Page Range

How to Cite an Article with an Article Number Instead of a Page Range

Many of our readers wonder what to do when citing these references in APA Style. No special treatment is required—simply include the page range as it is reported for the article in your APA Style reference. The page range may be listed on the DOI landing page for the article and/or on the PDF version of the article. Here is an example of an article with a page range, from the journal PLoS ONE:

If the article is published in a format without page numbers entirely, just leave off this part of the reference (i.e., end the reference with the volume/issue information for the article). Here is an example article without any page numbers, from the journal Frontiers in Psychology.

In-Text Citations of Direct Quotations

In the text, citations of direct quotations should refer to the page number as shown on the article, if it has been assigned. If the article has not been assigned page numbers, you have three options to provide the reader with an alternate method of locating the quotation:

• a paragraph number, if provided; alternatively, you can count paragraphs down from the beginning of the document;
• an overarching heading plus a paragraph number within that section; or
• an abbreviated heading (or the first few words of the heading) in quotation marks, in cases in which the heading is too unwieldy to cite in full, plus a paragraph number within that section.

Here is an example direct quotation from an article without page numbers that uses the abbreviated heading plus paragraph number method:

To increase the number of women in science and engineering, those in positions of power should strive to create "inclusive cultures so that those who are considering these fields do not necessarily have to embody the stereotypes to believe that they fit there" (Cheryan, Master, & Meltzoff, 2015, 'Conclusion,' para. 2).

You can read more about including page numbers in in-text citations here. Also see section 6.05 of the Publication Manual. Do you have additional questions about citing articles with article numbers? Please leave us a comment.
